DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite 3. for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in Ex parte Wu, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of Ex parte Steigewald, 131 USPQ 74 (Bd. App. 1961); Ex parte Hall, 83 USPQ 38 (Bd. App. 1948); and Ex parte Hasche, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 5 recites the broad recitation "naturally occurring source", and the claim also recites

Application/Control Number: 10/537,409 Page 3

Art Unit: 1621

"seaweed calcium, eggshell calcium, shell calcium, cuttlebone and the like" which is the narrower statement of the range/limitation.

Claim Rejections - 35 USC § 102/103

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1-8 and 13-18 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over US Pat. No. 4,830,716. The '716 patent disclose a process of making a pharmaceutical grade amino acid by reacting a metal carbonate and an amino acid ligand in an aqueous environment wherein the ligand to metal mole ratio is at least 2:1. The '716 patent particularly discloses the process of making copper diglycine amino acid chelate by reacting copper carbonate and glycine. See Example VII. The '716 patent teaches the use of amino acids other than glycine and metals used. See column 5, lines 24-34 and column 5, lines 35-39, respectively. The '716 differs from the instant claims in the lack of particular examples having glutamic acid or aspartic acid as amino acid used in the formation of the metal chelates. However, one skilled in the art would be motivated to

Application/Control Number: 10/537,409 Page 4

Art Unit: 1621

substitute copper carbonate with other metal carbonates and substitute glycine with aspartic or glutamic acid in the '716 patent since they are equivalent materials, as taught by the 716 patent, which are expected to react in a similar way to produce the particular amino acid metal chelate as claimed. Further, note that the compositions of claims 15-18 are known in the art, particularly used in animal nutrition. Although claim 18 recite a cosmetic intended use, said composition regardless of the intended use is known and obvious over the '716.

Allowable Subject Matter

7. Claims 9-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Porfirio Nazario-Gonzalez whose telephone number is 571-272-0641. The examiner can normally be reached on Mon.-Fri. (9:30 AM - 6:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thurman K. Page can be reached on 571-272-0602. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
